# Park's CHOICE ANNUAL PHLOX

## PHLOX DRUMMONDII

Zinnias are of easiest culture. When plants are a few inches high, keep well cultivated and give thorough soaking by trench method every two weeks. These flowers have been so wonderfully developed and come in such a splendid array of varieties in size, color, and form that no garden can be "in style" without them.

## INDEX AND GERMINATION TABLE

**W**HEN sowing seeds it is always best to divide the packets and sow at different times. Note the time and give good care until the plants have had time to appear. Figures here indicate pages, and letters indicate, as per key, the time needed for germination. Do not condemn seeds until you have given them at least two or three trials. Those marked z will often lie dormant for a year or more. Seeds of Trees and Shrubs should be sown in a retired bed which will not be disturbed for two or three years. Some will start in a reasonable time and can be removed. Germination, however, is variable and more or less tardy.
